

Mentorship HTML No.1 - 6 Months Calendar

Description

After the students receive the necessary starter files, the team needs to complete the assignment before the mentorship session and present their solution to the mentor. They should make a .zip from the solution and send it to the mentor in a private message on rocket.chat.

Objective:

Create a 6-month calendar using HTML tables to demonstrate proficiency in HTML structure and organization. This exercise aims to enhance individual skills in HTML while working collaboratively as a group.

Requirements:

1. Calendar HTML Structure:

- The calendar should cover a duration of 6 months.
- The entire calendar is a table.
- Each month should also be a separate table. Nest the month tables inside the main calendar table.
- The names of the months should be displayed as column headers.
- Create a row for the days of the week.
- Dates should be organized in rows corresponding to weeks.

2. Styling:

- Use *colspan* to span the columns where there is blank space.
- Use *bgColor* attribute from HTML to color the tables.
- Use html attributes on the tables for the other styles.
- Using CSS is not allowed for this exercise.

3. Collaboration:

- Divide the work evenly among the group members.
- Assign each member to a specific month or aspect of the calendar.
- Each member should work on their assigned section independently.

4. Submission:

- Combine individual contributions into a cohesive project.
- Share the final solution with the mentor.

Deadline:

Before the start of the mentorship session.
